

SETUP & USER GUIDE · SEPTEMBER 2026

Sarmaya Simple Billing

How to install it, put it online, set up the shop, make bills every day, close the day, and where the full trading ERP lives.

CONTENTS

What's inside

1. Two ways to run it — on one computer, or online for every device
2. Online setup step by step (Supabase + Vercel)
3. First day in the app — PIN, staff, company profile, opening balances, items, customers
4. Every day — making a bill, credit and payments, expenses, cash & bank, closing the day
5. Screen by screen
6. On a phone
7. The full trading ERP behind the switch, and how to come back
8. Data safety, backups and updates
9. Problems and answers
10. Reference: what each function does

Two ways to run it

WAY	GOOD FOR	WHAT YOU NEED
On one computer	A single counter PC, works with no internet. Data stays in that browser.	Node.js 18 or newer and the project folder.
Online	Owner's phone, counter PC and home laptop all seeing the same bills.	A free Supabase project (database) and a free Vercel account (hosting). About 20 minutes.

Either way the app is **local-first**: every bill is saved in the browser the moment you press Save, and copied to the cloud when a connection exists. A dropped internet line never stops billing.

A. On one computer

- 1 Install **Node.js** (LTS) from nodejs.org. Open a terminal in the project folder.
- 2 Install packages once: `npm install`
- 3 Start it: `npm run dev` — then open `http://localhost:3000` in Chrome. Leave the terminal window open while working.
- 4 For a permanent build without the dev tools: `npm run build` then `npm start`.

Keep in mind: "local only" data lives in that browser profile. Clearing browser data deletes it. Take a JSON backup from Admin → System & Backups every week (section 8).

Online setup, step by step

Step 1 — Create the database (Supabase)

- 1 Go to supabase.com → New project. Pick a name and a strong database password (write it down). Region: Singapore or Mumbai is closest to Pakistan.
- 2 Open **SQL Editor** → New query. Paste the whole contents of `supabase/schema.sql` from the project and press **Run**. This creates every table (customers, suppliers, products, invoices, ledger, expenses, cash entries, settings, users...).
- 3 **Existing database from an older version?** Do not run `schema.sql`. Run the migration files instead, once each, in order: `migrate_tons_to_kg.sql`, `migrate_v3_enterprise.sql`, `migrate_v4_cashbook.sql`, `migrate_v5_dispatch_tax_delivery.sql`, `migrate_v6_trade_documents.sql`, `migrate_v7_master_pin_sync.sql`, `migrate_v8_simple_billing.sql`. Skip the ones already run. **v8 creates the bills table** — without it bills stay on each device.
- 4 Project Settings → API. Copy the **Project URL** and the **anon public** key for the next step.

Step 2 — Put it online (Vercel)

- 1 The project is on GitHub: github.com/BilalKmhmand/TradeFlow, branch main.
- 2 vercel.com → Add New Project → Import that repository. The included `vercel.json` runs `npm run build` and serves `dist`.
- 3 Environment Variables — add both, then Deploy:

```
NEXT_PUBLIC_SUPABASE_URL=https://xxxxxxx.supabase.co
NEXT_PUBLIC_SUPABASE_ANON_KEY=eyJhbGciOi...
```
- 4 Open the Vercel URL on the phone and the PC. On the phone use the browser menu → **Add to Home Screen** so it opens like an app.
- 5 The sidebar footer shows **Cloud sync live** when the database is reachable, **Offline · local data** when it is not, and **Local only** when no keys are set.

Running locally against the cloud: create `.env.local` with the same two lines and run `npm run dev`.

First day in the app

1. Unlock and secure the PIN

The lock screen lists users. On a fresh install pick **Bilal Khan Mohmand** (super admin), enter PIN **7860** and press Unlock Terminal. Go to **Admin → User Accounts** straight away: change the super admin PIN, add the counter staff as **operator** (makes bills and takes money, cannot delete or open Admin) and a **manager** if needed. Remove the demo users you do not need.

2. Company profile — what prints on every bill

Admin → System & Backups → Company & invoicing. Company name, address, phone and NTN/STRN print on bills and daily sheets. Leave Sales tax % at 0 unless you charge tax. Keep **App mode = Simple billing**.

Rohail Zaman Traders BILLING | **Bilal Khan Mohmand SUPER ADMIN** | Lock

ADMINISTRATOR CONTROL CENTER
Manage user authentication, granular access permissions, screen visibility, and security policies.

Roles & RBAC Matrix | Visibility & Masking | Security Policies | Audit Trail | **System & Backups** | Data Import

Master Terminal PIN
Quick keypad access to unlock the terminal.

Current PIN:
New PIN: Confirm PIN:

Database Table Purges
Hard-empty individual tables. Purges bypass relational cascading.

Customers: 2 Purge table	Suppliers: 1 Purge table	Products: 3 Purge table	Bookings: 0 Purge table
Dispatches: 0 Purge table	Stock Receipts: 0 Purge table	Price History: 0 Purge table	Expenses: 1 Purge table
Fleet: 0 Purge table	Cash Entries: 0 Purge table	Quotations: 0 Purge table	Purchase Orders: 0 Purge table
Returns: 0 Purge table	Stock Adjustments: 0 Purge table	Follow-ups: 0 Purge table	Ledger Entries: 4 Purge table
WhatsApp Logs: 0 Purge table			

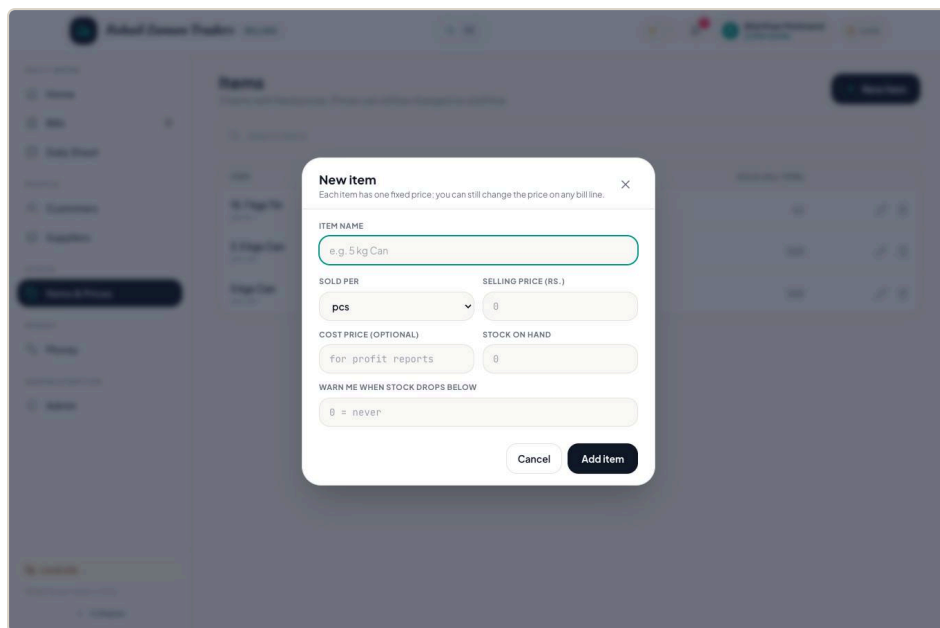

Admin → System & Backups: company profile, app mode, opening cash and bank, counting-from date.

3. Opening balances

On the same form (or Money → Opening balances) enter the cash in the drawer and the bank balance on the day you start, and set **Counting from** to that date. From that day every bill payment, expense, supplier payment and transfer moves those two numbers.

4. Items and their prices

Items & Prices → New item. One line per thing you sell: name (e.g. *5 kgs Can*), sold per (can, tin, bag, kg...), the fixed selling price, optional cost price, stock on hand, and the level for a low-stock warning. Prices can still be changed on any bill line.

New item.

5. Customers and suppliers

Add customers from the Customers screen (name and phone are enough), or type a new one inside a bill. To bring in an existing list, **Admin → Data Import** accepts a CSV with a downloadable template; an `openingDue` column sets what each customer already owes. Suppliers work the same, with `openingOwed`.

6. Take a first backup

Admin → System & Backups → Export backup downloads one JSON file with everything. Do this weekly; it restores on any device with **Import backup**.

Every day

Morning — Home

Home shows today's sales, cash received, expenses and "money in business", the four everyday buttons, recent bills, and anything that needs attention (unpaid bills, low stock).

The screenshot shows the 'Home' screen of the 'Rohail Zaman Traders' app. The top bar includes the app name, a 'BILLING' tab, a search icon, and user information for 'Bilal Khan Mohmand SUPER ADMIN'. The left sidebar lists navigation options: Home, Bills, Daily Sheet, Customers, Suppliers, Items & Prices, Money, and Admin. The main content area features four summary cards: 'SALES TODAY' (Rs. 1,204,950), 'CASH RECEIVED TODAY' (Rs. 1,197,150), 'EXPENSES TODAY' (Rs. 1,200), and 'MONEY IN BUSINESS' (Rs. 1,278,750). Below these are four action buttons: 'Add expense', 'Receive payment', 'Cash ↔ Bank', and 'Daily sheet'. A 'Recent bills' section lists two bills: 'Haji Karim' (Rs. 12,800 due) and 'Zaman and Co BTK' (Rs. 1,192,150 paid). A 'Money now' section shows 'Cash in hand' (Rs. 1,215,950), 'In bank' (Rs. 100,000), 'Customers owe you' (Rs. 7,800), and 'You owe others' (Rs. 45,000). A 'Needs attention' section highlights '1 unpaid bill worth Rs. 7,800' and 'Low stock: 15.7 kgs Tin (3 tin left)'.

Home.

Making a bill

- 1 Press **New Bill** (Home, Bills or Daily Sheet).
- 2 Pick the customer. New customer? Press **New**, type name and phone — saved with the bill.
- 3 Pick the item; its price fills in. Type the quantity. Change the price on that line if you agreed a different rate. **Add another item** for more lines.
- 4 Discount if any. Under **Paid now** type what the customer gave, or press **Full**. Choose the method: Cash, Bank Transfer, Cheque, Easypaisa / JazzCash, Card. Whatever is not paid becomes credit on the customer's account.
- 5 **Save**, or **Save & Print** for the printout. "Print / Save PDF" opens the browser print dialog; choose Save as PDF to send it on WhatsApp.

For Rohail Zaman Traders

Received by

Generated by Rohail Zaman Traders on 10 Sept 2026 by Bilal Khan Mohmand
All amounts in PKR (Rs.)

The printed bill.

One Save does all the bookkeeping: stock comes off the items, the bill goes on the customer's account, the cash paid enters the cash book on the cash or bank side, and the bill gets the next number.

Credit and receiving payments later

Open any bill from Bills or Home. While a balance remains, the **Receive payment** form is right there: amount (or Full), method, note. The bill turns *partial* then *paid*, and the customer's total due drops. For money against a customer's whole account (old dues, not one bill) use **Receive payment** on Home or Money.

Bill INV-2

New Bill

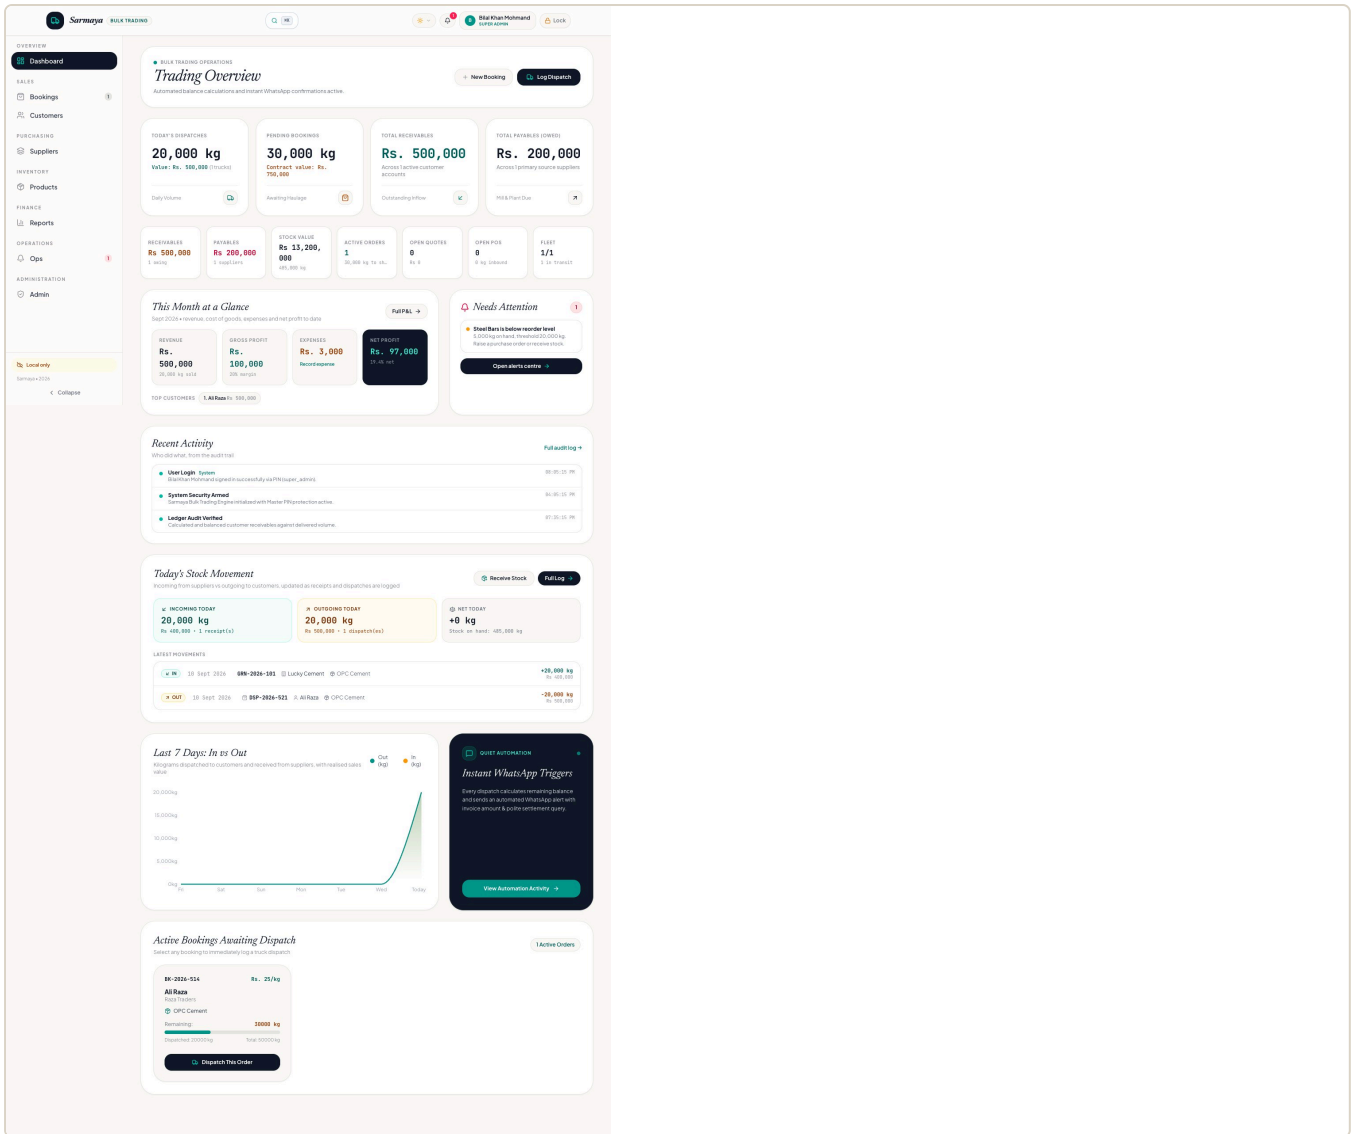

Bills

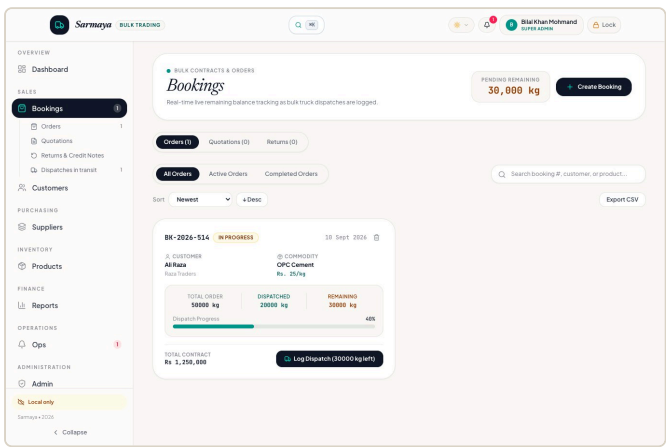

The full trading ERP behind the switch

Simple billing is the default face. Admins see an **Open full suite** card on Home; in the full suite the sidebar and Admin carry a **Back to simple billing** control. Both modes share the same customers, suppliers, items, ledger, cash book and users, so nothing is lost switching either way.

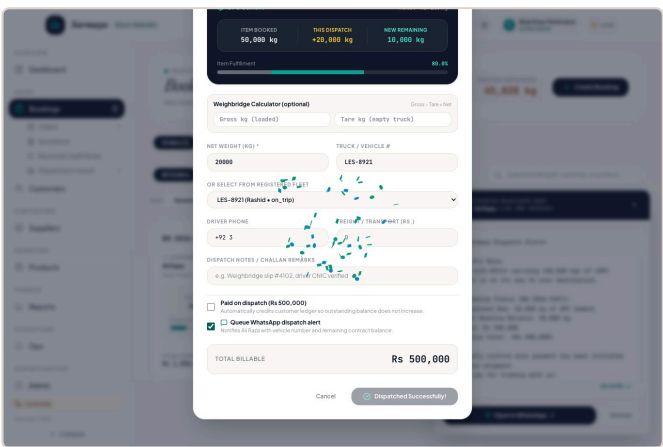

AREA	WHAT 'S THERE
Sales	Quotations → multi-item bookings with agreed customer rates and broker commission → truck dispatches with weighbridge, freight, tax and delivery status → tax invoice, delivery challan, credit notes, customer statements, WhatsApp alerts.
Purchasing	Purchase orders, receive stock against a PO, supplier payables and payments, supplier statements, debit notes.
Inventory	Stock in kg with low-stock alerts, stock adjustments, daily stock-flow log, price history with same-month / same-quarter / same-day-last-year comparison, product sales by month.
Finance	Daily and monthly reports, sales analytics, Profit & Loss, cash book, balance sheet, receivables and payables aging, expenses per category and per trip, CSV exports.
Operations	Alerts centre and header notifications, fleet & drivers, follow-up tasks.
Administration	Users with PINs, roles and permission matrix, screen and field visibility per role, lockout policy, audit trail, JSON backups, CSV import, purge, factory reset, cloud sync.

Data safety, backups and updates

- **Backup:** Admin → System & Backups → Export backup (JSON). Weekly, and before any update. Restore with Import backup.
- **Cloud:** with Supabase configured every change is upserted within a second; other devices see it on their next load. Deletes made in the app are removed from the cloud too.
- **Who can delete:** only roles with the delete permission (admin and super admin by default). Operators make bills and take money. Every delete is in the Audit Trail with the user's name.
- **Deleting a bill** reverses everything: stock goes back, the unpaid part comes off the customer, its payments leave the cash book.
- **Updates:** pull the latest main from GitHub; Vercel redeploys automatically. Then run any new `supabase/migrate_v*.sql` once in the SQL editor.
- **Factory reset** (Admin) wipes everything, cloud included. Export first.

Problems and answers

PROBLEM	ANSWER
Bills on the PC but not the phone	Run <code>supabase/migrate_v8_simple_billing.sql</code> once in Supabase. Until then bills stay on each device (not lost).
"Offline · local data" in the sidebar	Internet or Supabase unreachable. Keep working; it syncs when back. If it never comes back, check the two environment variables on Vercel.
Forgot the PIN	Another admin resets it under Admin → Users. With no other admin, restore the last backup in a fresh browser and set the PIN again.
Stock shows a minus number	More was billed than entered as stock. Edit the item and set the real stock on hand.
Wrong price on a saved bill	Saved bills are locked so the ledger stays true. Delete the bill (admin) and make it again.
Closing cash does not match the drawer	Check today's expenses have the right "paid from", and bank deposits went through Cash ↔ Bank, not as an expense.
Print looks cut off	In the print dialog choose A4, portrait, default margins, untick headers and footers.
Went into the full suite, how to come back?	Sidebar → Back to simple billing , or Admin → System & Backups → App mode → Simple billing.

Reference: what each function does

FUNCTION	DOES
createBill	Validates, computes subtotal / discount / tax / total / paid / balance, assigns the next INV number, saves the bill, takes stock off items, adds the unpaid part to the customer, writes the ledger lines (bill + payment with method), logs it.
payBill	Adds a payment to a bill (never more than the balance), updates status, reduces the customer's due, writes a ledger payment with the method so it lands in cash or bank.
deleteBill	Full reversal of createBill and all its payments. Admin only.
addCashTransfer	Two cash entries (out of one side, into the other) for a deposit or withdrawal.
recordCustomerPayment	Money against a customer's whole account; reduces due, ledger line, WhatsApp acknowledgement.
recordSupplierPayment	Money paid to a supplier; reduces what you owe, ledger line.
addExpense / deleteExpense	An expense with category and paid-from; "Credit (unpaid)" counts as owed, not cash.
addProduct / updateProduct / deleteProduct	Item CRUD; a price change is kept in price history.
updateSettings	Company profile, tax %, app mode, opening cash / bank / date.
collectCashMovements	Ledger payments + expenses + cash entries → one dated list with a method.
accountBalancesOn	Cash and bank on a date: openings + movements since the counting-from date, split by method.
positionSummary	Receivables, payables (suppliers + unpaid expenses), net position.
daySummary / buildDailySheet	One day's numbers, and the full sheet with opening/closing and grouped expenses.
filterBills	Search + period + unpaid filter for the Bills screen.
nextBillNumber	Highest existing number + 1.
isCashMethod	Methods starting with "Cash" are cash in hand; everything else is bank.
